## DOLPHIN ORTHO IMAGING

### Treatment Simulation

Dolphin Imaging Software is an FDA-cleared Class II medical device

The Treatment Simulations software module allows you to plan, diagnose, and present cases from the lateral view. Multidisciplinary VTO Wizards include step-by-step interactive programs for quick and easy analyses and treatment planning. It's the perfect tool for interdisciplinary clinicians to visualize outcome and work in concert. Dolphin Treatment Simulation can be used for both orthodontic and surgical cases.

### Orthodontic Treatment

- Arch Length Discrepancy worksheet: Initial condition, leeway, extraction, expansion and stripping.  
Growth Forecast : Simulate growth on a traced x-ray, or tracing overlaid on a photo by inputting current skeletal age and desired duration of growth.
- Appropriately alter soft tissue profile based on dental and skeletal movement.
- Develop treatment plan with any standard or custom cephalometric analysis.
- Customize skeletal-to-soft tissue movement ratios.
- Easily compare with other treatment plans.
